Sunrise™

Cordyline australis 'LELC03' 

Sunrise has vivid pink and maroon coloured foliage with good heat tolerance.

Need a stand out plant for a landscape? Sunrise is it. The colours speak for themselves. The form and toughness of this plant make it the perfect choice. It is far more heat tolerant than other pink types available, and it takes a lot of years to develop a trunk of any size.

Sunrise stands out in the landscape

It's foliage keeps clean colour even in colder temperatures. As a patio pot plant, Sunrise really shines. It looks great, but best of all, unlike other vivid pinks it keeps looking great. If after many years you are happy for this plant to form a small tree, let it go, but if you want it kept low, cut it back 15cm above ground in autumn or spring and it will re-shoot well. Sunrise performs well when cut back.

DESCRIPTION	Vivid pink to maroon coloured foliage
HEIGHT & WIDTH	1-2 metres x 80-100 cm
POSITION	Full sun to shade
CARE	Cut back after 5 years if desired
USES	Colour contrast, specimen plant, mass planting
SOIL TYPE	Sandy to moderately heavier soils
